(54) Title: METHOD AND ARRANGEMENT FOR POSITIONING A MOBILE TERMINAL

(57) ~~Abstract:~~ The invention relates to a method and arrangement for positioning a mobile terminal, particularly within a finite local area. In the method, in the transmitting mobile terminal, there is defined a function that is observable by senses and executable, and a functional instruction (201) is created for activating said function. The functional instruction (201), the function according to which is arranged to be activated as a response to receiving the functional instruction, is transmitted via the established wireless short-range connection (203). In the receiving mobile terminal, the functional instruction is received via the wireless short-range connection (204), and the function defined in the functional instruction is activated (205) as a response to receiving the functional instruction.
